Solar photovoltaic SPD is a protective device designed for solar power generation systems to prevent lightning strikes and power surges from damaging the system. It protects inverters, controllers, batteries and other key components by quickly responding and absorbing or shunting overvoltage. With a millisecond response time, it can detect and handle overvoltage in a very short time, effectively preventing equipment damage. With a multi-level protection design, it provides comprehensive protection from power input to output, ensuring that every part of the system is fully protected. SPD ensures the long-term stable operation of the system and reduces the risk of failure caused by lightning strikes and power surges.
