According to our (Global Info Research) latest study, the global Solar Pickup Trucks market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A Solar Pickup Trucks refers to an electric vehicle that is powered by direct solar energy. Typically, photovoltaic (PV) cells contained in solar panels convert solar energy directly into electricity.

The concept of a solar pickup truck is to install solar panels on the surface of the vehicle (usually the roof) to capture sunlight and convert it into electricity. This is designed to provide some additional electrical support to help reduce the vehicle's energy consumption and reduce dependence on traditional energy sources. A number of automakers have already demonstrated prototype solar-powered pickup trucks, and there are plans to launch commercial products in the next few years. However, the efficiency and cost of solar panels and their impact on vehicle performance and appearance remain among the challenges facing the industry today.
