Solar powered chemical dosing system is an advanced equipment that uses solar energy as energy supply and realizes precise proportioning of chemicals through intelligent control. The system is usually composed of core components such as solar photovoltaic panels, battery energy storage system, intelligent control system and chemical metering pump. Solar photovoltaic panels are responsible for capturing sunlight and converting it into electricity, providing green and sustainable energy for the entire system. The battery energy storage system is used to store excess electricity to ensure that the system can still operate stably in the case of insufficient light. Solar Powered Chemical Dosing System is widely used in water treatment, chemical industry, pharmaceutical and other fields. Its environmental protection, energy saving and high efficiency have been widely recognized and praised. The system not only helps to reduce the operating costs of enterprises, but also reduces dependence on traditional energy, making positive contributions to environmental protection and sustainable development.
