According to our (Global Info Research) latest study, the global Solar Powered LED Street Light market size was valued at USD 1421 million in 2023 and is forecast to a readjusted size of USD 2863.3 million by 2030 with a CAGR of 10.5% during review period.

Solar LED street lights are systems that get their power from the sun and make electricity and light. The way solar LEDs work is that sunlight is turned into electricity, which lights the lamp directly and heats water for use in the home at night. In a solar street lighting system, photovoltaic panels are put on the top of the lamp post to store energy from the sun. When fossil fuels are used, the chance of climate change goes up. This means that we need to switch to green energy. Solar street lights cut down on how much we rely on traditional energy sources, help cut down on carbon emissions, and help us reach our green energy goals. Solar street lights are a good way to light up places that don't have enough electricity. Solar street lights are used on many streets, roads, courtyards, parks, airports, and other places.

China has implemented the Renewable Energy Law since 2006, in which Article 4 clearly states that, the State gives first priority to the exploration of renewable energy. Over the years, various departments of the Chinese government have successively issued a large number of policies, covering production, sales, taxation, subsidies and other aspects. After setting the carbon neutrality goal in 2021, from a national perspective, the upgrading of the energy structure is ever imperative, and therefore the optoelectronic industry has great potential. The European Commission released the Net-Zero Industry Act in 2023. This bill aims to stimulate local manufacturing in Europe, reduce import dependence on China, and ensure that at least 40% of the EU's clean

energy demand can be met by 2030. The EU targets an installed solar capacity of 600 GW. Overall, the European market still has a lot of room for development. US 2022 release of the Inflation Reduction Act, which includes \$369 billion for energy security and climate change investments. For the photovoltaic industry, the bill stimulates its development from multiple aspects such as corporate and individual tax credits, production subsidies, and loans throughout the industry chain, and revitalizes the domestic manufacturing industry in the United States. Japanese authorities plan to make solar panels mandatory for new residential buildings in Tokyo from 2025 onwards. It is estimated that by 2030, photovoltaic power generation will account for 14%-16% of Japan's total power generation, and the cumulative installed capacity of photovoltaic systems will be about 117.237 GW.
