Abstracts

According to our (Global Info Research) latest study, the global Solar Pump Inverter market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Solar pumping inverter converts DC current from the solar array into AC current to drive the pump. With the function of MPPT (maximum power point tracking), it regulates the output frequency according to irradiation in real time to achieve the maximum power.

Solar Inverters Features:

1. Adopting the proposed dynamic VI maximum power point tracking (MPPT) control method; Fast response and stable operation; Better than the conventional methods which may lead to the problems including poor tracking performances, unstable or even cause water hammer damaging when the irradiation on the array changes rapidly.
 2. The solar pumping inverters system is dispensed with energy storing devices, and stores water instead of electricity. It improves the reliability of the device, at the same time, it lowers the construction and maintenance costs of the system dramatically.
 3. Digital control; automatic operation and data acquisition/storage of 8 years, etc; 98% of conversion efficiency, and complete protection.
 4. In-line blocks; user friendly; convenient for operating; perfect cooling and shielding.
- Global Solar Pump Inverter key players include ABB, Hitachi, Voltronic Power, etc. Global top three manufacturers hold a share over 40%. Europe is the largest market, with a share about 70%, followed by Africa and Middle East, both have a share over 25 percent. In terms of product, Single Purpose is the largest segment, with a share about 95%.

And in terms of application, the largest application is Commercial Use, followed by Home Use.
