Abstracts

According to our (Global Info Research) latest study, the global Solar PV Tracking Bracket market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Solar PV Tracking Brackets are special brackets designed for placing, installing, and fixing solar panels in solar power generation systems. In the cost structure of the entire photovoltaic power generation system, the cost of brackets accounts for approximately 16.3% of the investment cost of the power station, and has a negative impact on the life of the photovoltaic power generation system. and power generation efficiency have an important impact. Photovoltaic brackets can be divided into tracking brackets and fixed brackets. The tracking bracket can adjust its angle as the incident angle of the sun changes. Compared with the fixed bracket, it can usually achieve a power generation gain of 5%-35%.

In some large-scale ground power stations, tracking brackets have better economics. Using tracking brackets instead of fixed brackets can harvest higher projects through the increase in power generation.

In order to achieve the zero-carbon goal, the pace of global energy transformation is accelerating. At present, more than 130 countries and regions around the world have successively announced carbon neutrality goals and established an energy system dominated by renewable energy. It has become a global consensus to achieve green and sustainable development. , against the background of the global increase in the proportion of renewable energy consumption, the world's new wind and solar installed capacity will continue to grow rapidly.

According to data released by Wang Bohua, chairman of the Photovoltaic Annual Conference, it is expected that the global newly installed photovoltaic capacity will be 150-170GW in 2021, and will continue to maintain an average annual growth of 30-40GW in the next few years. It is expected that the new global installed capacity in 2025 will Reaching 270-330GW, the compound increase of new installed capacity

The speed is about 17%. The growth of photovoltaic installed capacity drives the demand for brackets to grow.
