The solar runway lighting system is a green energy solution that uses photovoltaic panels to convert solar energy into electrical energy and provides nighttime lighting for airports, stadiums or road runways through energy storage batteries and LED lamps. The system consists of solar panels, intelligent charge and discharge controllers, high-efficiency lithium battery packs, high-brightness LED lights and wireless control modules, and has the characteristics of automatic light control, remote monitoring and low maintenance costs. It does not require an external power grid and is suitable for remote areas or emergency sites. It can significantly reduce carbon emissions and operating costs, while improving runway safety and visibility.
