Abstracts

A solar scoreboard is a scoreboard system that utilizes solar energy as a source of energy. It combines solar technology and electronic display technology to achieve an environmentally friendly, energy-saving and sustainable scoreboard solution. The working principle of the solar scoreboard mainly relies on solar panels. During the day, solar panels absorb sunlight and convert it into electrical energy, which is then stored in energy storage devices. At night or when there is insufficient light, the electrical energy in the energy storage device will automatically be converted into light energy, and bright light will be emitted through light-emitting devices such as LEDs to display scoring information or outline pattern outlines.
