## Abstracts

The global Solar String Inverters market size is expected to reach \$ 13330 million by 2029, rising at a market growth of 9.2% CAGR during the forecast period (2023-2029).

A solar string inverter is a type of inverter that converts all of the direct current (DC electricity) in strings of panels into usable alternating current (AC electricity). It is also known as a central inverter. Under this PV setup, the solar panels are wired together through a common “string” and all of the energy the panels produce is sent to a single inverter that is typically located a short distance away in a location between the solar array and the switchboard.

This report studies the global Solar String Inverters production, demand, key manufacturers, and key regions.
