Abstracts

According to our (Global Info Research) latest study, the global Solar Truck market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The development prospects of solar trucks are optimistic. Solar trucks use solar energy as a power source, do not emit harmful exhaust gas and particulate matter, and cause less pollution to the environment. They are in line with the global trend of environmental protection and sustainable development. In addition, solar trucks also have lower operating costs and can significantly reduce fuel expenses and maintenance costs, thus improving operational efficiency. At present, some car companies have begun to try to install solar panels on trucks, but due to limitations in installation area and power generation, the actual results are not satisfactory. However, with the continuous advancement of technology and reduction of costs, solar trucks are expected to be more widely used and promoted in the future.
