Abstracts

The global Solar Truck market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The development prospects of solar trucks are optimistic. Solar trucks use solar energy as a power source, do not emit harmful exhaust gas and particulate matter, and cause less pollution to the environment. They are in line with the global trend of environmental protection and sustainable development. In addition, solar trucks also have lower operating costs and can significantly reduce fuel expenses and maintenance costs, thus improving operational efficiency. At present, some car companies have begun to try to install solar panels on trucks, but due to limitations in installation area and power generation, the actual results are not satisfactory. However, with the continuous advancement of technology and reduction of costs, solar trucks are expected to be more widely used and promoted in the future.
