The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The solar vacuum tube is similar in design to a coffee thermos. It consists of two layers of glass, with a vacuum between the two layers. The outer layer of the solar tube is borosilicate glass with a very low iron content, which allows 98% of the light energy to pass through. It can be used for a variety of applications such as hot water tanks, radiators and underfloor heating. The copper collector holds only a small amount of liquid and can be used with any heat exchanger that uses a glycol mixture to prevent icing.
