Abstracts

The global Solar Vacuum Tube market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The solar vacuum tube is similar in design to a coffee thermos. It consists of two layers of glass, with a vacuum between the two layers. The outer layer of the solar tube is borosilicate glass with a very low iron content, which allows 98% of the light energy to pass through. It can be used for a variety of applications such as hot water tanks, radiators and underfloor heating. The copper collector holds only a small amount of liquid and can be used with any heat exchanger that uses a glycol mixture to prevent icing.

This report studies the global Solar Vacuum Tube production, demand, key manufacturers, and key regions.
