## Abstracts

A Solar Water Heater is a device which provides hot water for bathing, washing, cleaning, etc. using solar energy. It is generally installed at the terrace or where sunlight is available and heats water during day time which is stored in an insulated storage tank for use when required including mornings.

Solar water heating systems include storage tanks and solar collectors. There are two types of solar water heating systems: active, which have circulating pumps and controls, and passive, which don't.

Scope of the Report:

This report focuses on the Solar Water Heater in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Solar hot water heaters and "green" heating systems are more attractive than ever before, because they are more competitive, reliable, using free renewable energy and providing high efficient operation.

The main competitors in the Chilean market are Rheem, Helioakmi, Sole S.A. and other European and American companies as well as numerous companies from China.

Rheem as a global leader, occupies the largest market share, Chinese companies with lower production costs also occupy a larger share, which is seeing to occupy larger share in the future.

Compared to other regions, Chile has the following environment development advantages: 1) Rich natural resources: Chile has plenty of sunshine in the north, rich in solar energy; 2) Increased demand: With the continued development of the economy and the improvement of people's living standards, electricity demand will continue to

increase; 3) Insufficient supply: water power is unstable, thermal power generation is high cost? wind power and gas power is small, which cannot meet the daily production and living needs. Solar water heaters can share the power demand, ease supply pressure, while reducing user costs at the same time.

The worldwide market for Solar Water Heater is expected to grow at a CAGR of roughly 8.8% over the next five years, will reach 11 million US\$ in 2023, from 7 million US\$ in 2017, according to a new GIR (Global Info Research) study.
