Abstracts

According to our (Global Info Research) latest study, the global Solder market size was valued at USD 8897.6 million in 2023 and is forecast to a readjusted size of USD 10780 million by 2030 with a CAGR of 2.8% during review period.

Solder is a fusible metal alloy used to create a permanent bond between metal workpieces. Traditional solder that used to be used for soldering in the In-car Application used to be a mixture of tin and lead. Different types of solder are used for different purposes. With the drive to reduce the amount of lead being used for environmental and health reasons, lead free solder is now being widely used. A European Directive mandates that solder containing lead shall not be used commercially. This means that for any soldering to be undertaken by the hobbyist the traditional solder containing lead will not be available.

The industry is crowded with manufacturers and intense competition. The leading producers are Alpha Assembly Solutions, Senju Metal Industry and AIM Metals & Alloys, with revenue ratios of 5.42%, 3.67% and 3.33%. According to the region, Asia Pacific's income is the highest, accounting for about 78 percent in 2022. In terms of product type, Solder Wires is the largest segment, occupied for a share of about 50%, and in terms of application, Consumer Electronics Application has a share about 63 percent.
