Abstracts

Solder Resist Ink (Solder mask) is a lacquer-like layer of polymer that provides a permanent protective coating for the copper traces of a printed circuit board (PCB) and prevents solder from bridging between conductors, thereby preventing short circuits. And also, the biggest advantage you get with solder mask is that soldering gets much easier, as solder doesn't spread everywhere and gets confined to the pads, making things much easier and reliable. Created primarily to facilitate wave soldering, it was well used in mass assembly. Green is its traditional color but now many colors are available.

Scope of the Report:

This report focuses on the Solder Resist Ink in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The market concentration degree is relative high with the top seven manufacturer occupied more than 90% market share. Among them, Taiyo, the largest manufacturer of solder resist ink has occupied more than half of the global market.

Japan is the most important supplier of solder resist ink in the global, though its production is lesser than China. But the advanced technology is origin from Japan, because the headquarters of largest manufacturers like Taiyo and TAMURA are located in Japan.

China is the largest supplier and also the largest consumption market of solder resist ink. Though annual production of solder resist ink is very large, PCB manufacturers still need to imported considerable amount of solder resist ink from abroad due to the large

consumption volume.

The worldwide market for Solder Resist Ink is expected to grow at a CAGR of roughly 2.0% over the next five years, will reach 540 million US\$ in 2023, from 480 million US\$ in 2017, according to a new GIR (Global Info Research) study.
