According to our (Global Info Research) latest study, the global Soldering Machine market size was valued at USD 11210 million in 2023 and is forecast to a readjusted size of USD 13670 million by 2030 with a CAGR of 2.9% during review period.

Soldering Machine including soldering stations, soldering irons, and hot-air rework stations.

Soldering machines typically consist of a power unit/control station and a handpiece or iron. The power unit provides the necessary electric power and temperature control. The handpiece or iron is the tool that directly applies heat to the workpiece and delivers the solder. A soldering station is a more advanced soldering machine that includes temperature control, often with digital displays. It allows for precise temperature settings and provides a stable and controlled heat source for consistent soldering results. When operating a soldering machine, it is essential to follow safety precautions and guidelines to prevent burns or injuries. This includes using heat-resistant gloves, working in well-ventilated areas, and ensuring the machine is properly maintained.
