## Abstracts

According to our (Global Info Research) latest study, the global Soldering Robot market size was valued at USD 206.7 million in 2023 and is forecast to a readjusted size of USD 297.9 million by 2030 with a CAGR of 5.4% during review period.

Soldering robot is a machine to finish Soldering. Soldering is a process in which two or more items (usually metal) are joined together by melting and putting a filler metal (solder) into the joint, the filler metal having a lower melting point than the adjoining metal. Soldering differs from welding in that soldering does not involve melting the work pieces. In brazing, the filler metal melts at a higher temperature, but the work piece metal does not melt. In the past, nearly all solders contained lead, but environmental and health concerns have increasingly dictated use of lead-free alloys for electronics and plumbing purposes.

Japan is the largest Soldering Robot market with about 46% market share. China is follower, accounting for about 40% market share.
