Abstracts

The global Solderless Breadboards market size is expected to reach \$ 27.34 million by 2032, rising at a market growth of -4.3% CAGR during the forecast period (2026-2032).

This report studies the Solderless Breadboards market, a breadboard is a construction base for prototyping of electronics. Originally it was literally a bread board, a polished piece of wood used for slicing bread. In the 1970s the solderless breadboard (AKA plugboard, a terminal array board) became available and nowadays the term 'breadboard' is commonly used to refer to these.

Because the solderless breadboard does not require soldering, it is reusable. This makes it easy to use for creating temporary prototypes and experimenting with circuit design. For this reason, solderless breadboards are also extremely popular with students and in technological education. Older breadboard types did not have this property.

China is the largest producer of Solderless Breadboards, with a market share about 35%, followed by North America and Europe, etc. 3M, B&K Precision, MikroElektronika, Twin Industries and SparkFun Electronics are the top 5 manufacturers of industry, and they had about 50% combined market share.

This report studies the global Solderless Breadboards production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Solderless Breadboards and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and
