Abstracts

According to our (Global Info Research) latest study, the global Solderless Breadboards market size was valued at USD 42 million in 2023 and is forecast to a readjusted size of USD 31 million by 2030 with a CAGR of -4.2% during review period.

This report studies the Solderless Breadboards market, a breadboard is a construction base for prototyping of electronics. Originally it was literally a bread board, a polished piece of wood used for slicing bread. In the 1970s the solderless breadboard (AKA plugboard, a terminal array board) became available and nowadays the term 'breadboard' is commonly used to refer to these.

Because the solderless breadboard does not require soldering, it is reusable. This makes it easy to use for creating temporary prototypes and experimenting with circuit design. For this reason, solderless breadboards are also extremely popular with students and in technological education. Older breadboard types did not have this property.

China is the largest producer of Solderless Breadboards, with a market share about 35%, followed by North America and Europe, etc. 3M, B&K Precision, MikroElektronika, Twin Industries and SparkFun Electronics are the top 5 manufacturers of industry, and they had about 50% combined market share.
