According to our (Global Info Research) latest study, the global Soldier Modernization market size was valued at USD 11200 million in 2023 and is forecast to a readjusted size of USD 12960 million by 2030 with a CAGR of 2.1% during review period.

The net weight of carrying these modern equipment prevents soldiers from being agile, mobile and effective in the face of war, especially in difficult terrains, high elevations and fast-paced operations that today's troops experience, the weight on their shoulders is critical. Because of the equipment weight they often tend to leave the lifesaving equipment as it is the heaviest compared to rest thus making them vulnerable to dangers. The key to soldier modernisation market is to reduce the weight of equipment to the lowest possible, without compromising protection and performance, at the time of need.
