According to our (Global Info Research) latest study, the global Solenoid Valve Block Air Supply System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The Vehicle Integrated Solenoid Valve Block Air Supply System is one of the core components of the air suspension system and is responsible for controlling the distribution of airflow between the compressor, air reservoir and air springs. Through the solenoid block, the system is able to precisely adjust the vehicle's body height, balance and suspension stiffness, thereby improving driving comfort and handling.

Today the majority of new cars in the luxury and upper middle class range, including some Sport Utility Vehicles (SUVs) , have air suspension. The volume of the air in the air cushions in all corners of the car can be controlled. This is done by controlling the flow of the air in and out of the additional air reservoirs. The system includes a special air compressor, one or two air reservoirs, four shock absorber units with air springs and traditional shock absorbers, 2 to 5 stand-alone accelerometers and the electronic control unit (ECU) .
