The global Solid Fiber Slip and Tier Sheet market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Slip sheets and tier sheets are essential palletizing accessories used in the packaging, storage, and transportation industry to facilitate the handling and movement of goods. Slip sheets, typically made of plastic or cardboard, serve as a pallet substitute or supplement by providing a smooth surface for items to slide easily and reducing packaging weight and costs, while tier sheets, made of cardboard or paperboard, are used to separate and protect individual layers of products within a unit load or on a pallet to prevent damage and maintain product integrity during storage and transit. Both slip sheets and tier sheets are instrumental in improving material handling efficiency, enhancing product safety, and optimizing logistics processes across a wide range of industries.
