## Abstracts

According to our (Global Info Research) latest study, the global Solid Liquid Separation Filter Press market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The solid liquid separation filter press is a commonly used device for separating solids and liquids in a mixture. It separates the liquid in the mixture through the filter medium (usually the filter cloth or the filter plate) by applying the pressure, while the solid remains on the filter medium, so as to achieve the purpose of solid liquid separation.

The working process of solid-liquid separation filter press is as follows: feeding, filter media, pressure application, separation, deliquoring and washing (optional). Solid-liquid separation filter presses are widely used in processes such as solid-liquid separation, solid-liquid dehydration, solid-liquid recovery, and liquid clarification. When selecting a solid-liquid separation filter press, factors such as processing capacity, operating pressure, filter medium type, and operating requirements need to be considered, and the equipment should be customized and optimized to meet specific application requirements.
