Abstracts

A solid oxide electrolyzer cell (SOEC) is a solid oxide fuel cell that runs in regenerative mode to achieve the electrolysis of water (and/or carbon dioxide) by using a solid oxide, or ceramic, electrolyte to produce hydrogen gas (and/or carbon monoxide) and oxygen. The production of pure hydrogen is compelling because it is a clean fuel that can be stored, making it a potential alternative to batteries, methane, and other energy sources. Electrolysis is currently the most promising method of hydrogen production from water due to high efficiency of conversion and relatively low required energy input when compared to thermochemical and photocatalytic methods.

According to our (Global Info Research) latest study, the global Solid Oxide Electrolyzer Cell (SOEC) for Green Hydrogen Production market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.
