## Abstracts

With the increase of global environmental awareness and the implementation of strict global regulations, in the past few years, a sharp change has occurred from solvent-based to water-based polyurethane materials. Solid polycarbonate diols give polyurethane products higher resistance to hydrolysis, oxidation, staining and abrasion. At low temperatures, solid polycarbonate diols provide the best performance, strength, high thermal stability, and excellent mechanical properties. The increase in demand for solid polycarbonate is mainly due to the growing demand for high-performance synthetic leather and the growing demand for mid-water coatings such as automobiles, furniture and textiles. The availability of various solid products with different molecular weights and their suitability for several end uses will help maintain their advantages over the forecast period.

According to our (Global Info Research) latest study, the global Solid Polycarbonate Diol market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
