In 2025, global sales volume of Solid Polyepoxide reached 893.43 k tons, with an average global market price of US$2,638 per ton and an industry average gross margin of 15.6%.

The major upstream raw materials include epichlorohydrin, bisphenol A, sodium hydroxide, organic solvents, and other materials.

Major upstream suppliers include Olin, LOTTE Fine Chemical, INEOS, SABIC, LG Chem, CCP, Nan Ya Plastics, and others.

Major downstream customers include PPG, AkzoNobel, BASF, Henkel, Arkema, Owens Corning, DuPont, Solvay, and others.

Solid Polyepoxide refers to a class of polymer materials that are solid at room temperature, contain two or more epoxy groups in their molecular structure, and can react with curing agents through crosslinking reactions to form three-dimensional thermosetting network structures. These products are generally produced by further chain-extension reactions between bisphenol A-based liquid polyepoxide and bisphenol A, which increase the molecular weight and epoxy equivalent weight and convert the material from a liquid into solid forms such as flakes, granules, or powders. The category also includes certain bisphenol F-based, novolac-based, and other specialty solid epoxy systems. Solid Polyepoxide typically offers good adhesion, mechanical strength, chemical resistance, electrical insulation properties, thermal stability, and film-

forming performance, while also providing advantages in storage, transportation, and powder processing. Depending on molecular structure, epoxy equivalent weight, softening point, and modification method, Solid Polyepoxide can be classified into low-, medium-, and high-epoxy-equivalent grades as well as grades with different softening temperature ranges. It is mainly used in powder coatings, industrial anticorrosion coatings, can and coil coatings, electrical insulation materials, electronic encapsulation materials, adhesives, composites, and other industrial applications.
