According to our (Global Info Research) latest study, the global Solid-state Battery Cell Wet-process Mixer market size was valued at US\$ 119 million in 2025 and is forecast to a readjusted size of US\$ 573 million by 2032 with a CAGR of 25.0% during review period.

In 2025, global sales of Solid-state Battery Cell Wet-process Mixer reached 136 units, with an average global market price of USD 856,000 per unit. The gross margin of major industry players was approximately 30%–45%. Solid-state Battery Cell Wet-process Mixer is a dedicated front-end process equipment used in the manufacturing of solid-state and semi-solid-state batteries. It is mainly used to mix, knead, disperse and deaerate raw materials such as cathode materials, anode materials, solid electrolytes, conductive agents, binders and solvents, thereby preparing uniform and stable battery slurry. The prepared slurry is subsequently used in coating, casting, lamination, drying and other processes, making the equipment a key factor affecting slurry uniformity, electrode film quality and cell consistency in solid-state battery production. The upstream supply chain mainly includes motors, reducers, mixing blades, twin screws, vacuum systems, metering and feeding systems, seals, sensors, PLC control systems and stainless-steel structural components. Downstream customers are primarily manufacturers of solid-state batteries, semi-solid-state batteries and next-generation lithium batteries, with end-use applications covering new energy vehicles, consumer electronics and aerospace.
