According to our (Global Info Research) latest study, the global Solid State Battery Coating Machine market size was valued at US\$ 449 million in 2024 and is forecast to a readjusted size of USD 2493 million by 2031 with a CAGR of 27.6% during review period.

The solid-state battery coating machine is the core equipment used to manufacture solid-state batteries. It is mainly responsible for uniformly coating electrode active materials and solid electrolytes on the surface of the substrate to form a thin and uniform electrode layer. Compared with the traditional liquid battery coater, its process is more complicated and needs to adapt to the high viscosity and low fluidity characteristics of the solid electrolyte, while ensuring the coating accuracy and interface bonding strength to meet the high energy density and high safety requirements of solid-state batteries.
