According to our (Global Info Research) latest study, the global Solid State Battery Isolators market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Solid State battery isolators are isolation devices used in Solid State battery systems. They protect battery management systems (BMS) and other electronic components from high voltages and currents through electrical isolation. These isolators are typically based on coreless transformer technology and are able to transfer energy across the isolation barrier while providing fast switching and protection capabilities. Solid State battery isolators are designed and applied to improve the safety and efficiency of battery systems while reducing reliance on traditional electromechanical relays and providing a more compact and reliable solution.
