Solid-state battery isostatic technology is an advanced process that applies uniform isotropic pressure on battery materials or cell stacks to achieve intimate contact between electrodes and solid electrolytes. This technology includes Cold Isostatic Pressing (CIP), Warm Isostatic Pressing (WIP), and Hot Isostatic Pressing (HIP), significantly enhancing energy density, cycle life, and safety performance of solid-state batteries, and is widely used in R&D, pilot-scale, and mass production of solid-state batteries.

With the rapid growth in demand for high-performance solid-state batteries in electric vehicles, energy storage, and wearable electronics, the market for solid-state battery isostatic technology is expanding rapidly. Warm Isostatic Pressing equipment, in particular, plays a key role in electrode and electrolyte interface compaction, driving the global market through manufacturers such as Quintus and HANA. The market is expected to continue growing over the next five years, extending deeper into pilot-scale and mass production applications.
