According to our (Global Info Research) latest study, the global Solid State Connector market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Solid state connector is a device or circuit that is made entirely from solid material and within which electrons and various other charged particles are entirely confine. The working principal of a solid state connector is entirely the same as that of a conventional gas discharge tube device. In a solid state connector the electric charges are confined within the solid elements and are engineered to amplify or switch the electric charges.

Current in a solid state connector flows in two form, that is negatively charges electrons and positively charged electron deficiencies termed as holes. A solid state connector is generally used in solid state lighting applications such as light-emitting diode (LED) or organic light-emitting diode (OLED) among others. The market of solid state connector is at the nascent stage at present and is anticipated to grow at an exponential rate in the coming years owing to its increasing adoption across various lighting applications.
