Solid-state lighting (SSL) are the type of lighting which features semiconductor light-emitting diodes (LEDs), polymer light-emitting diodes (PLED) or organic light-emitting diodes (OLED), as sources of lighting instead of plasma i.e. used in arc lamps such as fluorescent lamps, electrical filaments, or gas. Solid state lighting system has the potential to reduce lighting energy consumption globally, as they are ten times more efficient than incandescent lighting and twice as efficient as fluorescent lighting. Some other features which attract consumers for adoption of solid state lighting systems include low power consumption, ability to withstand strong vibrations, no mercury content, no or minimum UV and IR radiation, ultra-long source life and digital controllability. Increasing application of solid state lighting systems in automobiles is a factor that is expected to drive the growth in the coming years.

According to our (Global Info Research) latest study, the global Solid State Lighting System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
