## Abstracts

According to our (Global Info Research) latest study, the global Solid-State Marine Radar market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Solid-State Marine Radar is a marine radar system based on solid-state transmission technology, using semiconductor transmitters (such as gallium nitride GaN or gallium arsenide GaAs) instead of traditional magnetrons. Compared with traditional pulse radar, solid-state radar has higher stability, lower maintenance requirements, higher resolution and faster target update rate. Its core advantages are that it can provide clear images, support multi-band operation and have stronger target recognition capabilities, making it suitable for a variety of marine environments, including bad weather and complex offshore channels.
