Solid State Open Array Marine Radar is an open array ocean radar based on solid-state technology, which is widely used in ship navigation and collision avoidance. Unlike traditional magnetron radar, solid-state radar uses solid-state transmitters (such as semiconductors) instead of traditional electron tube technology, which provides higher reliability, lower power consumption and clearer target detection capabilities. The open array design has stronger directionality and detection range, and is usually used in large ships, commercial fishing boats and high-end yachts.
