The global Solid State Pulsed Laser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A solid-state pulsed laser is a type of laser that uses a solid-state lasing medium, such as crystal or glass, as the active medium. It is a device that produces pulsed laser light, with each pulse having a very high energy peak. Solid-state pulsed lasers are widely used in many fields, such as medical treatment, material processing, scientific research and communication. Its high energy, short pulse width and high beam quality make it suitable for applications requiring high precision and high performance, such as laser cutting, marking, laser eye surgery, laser ranging and scientific experiments, etc.
