?Radar solid-state transmitter? is a radar transmitter that uses solid-state electronic components. It makes a solid-state high-power amplifier module by combining the output power of multiple high-power transistors in parallel. The main advantages of solid-state transmitters include high reliability, low power consumption, high efficiency and modular design. Early solid-state radar transmitters mainly worked in the shortwave, VHF and UHF bands. With the advancement of technology, the operating frequency has gradually expanded to C-band, X-band, and even millimeter-wave bands. As the design level and manufacturing technology of microwave power transistors continue to improve, solid-state transmitters have shown great development potential.
