The global Soluble Silk Fibroin Powder market size is expected to reach \$ 275 million by 2032, rising at a market growth of 11.2% CAGR during the forecast period (2026-2032).

In 2024, global Soluble Silk Fibroin Powder reached approximately 1,008 tons, with an average global market price of around 124.6 USD/kg.

Soluble Silk Fibroin Powder is a natural protein-based powder derived from silkworm cocoons or silk fibers, produced through a series of specialized processes including degumming to remove sericin, controlled dissolution of silk fibroin, purification (such as dialysis or ultrafiltration), and drying (often freeze-drying). Distinguished from insoluble natural silk fibroin by its modified molecular structure (predominantly random coil or low-molecular-weight peptides), it can dissolve quickly or readily in water to form stable, uniform solutions while retaining inherent properties of silk fibroin such as biocompatibility, moisture retention, and nutritional value, making it a versatile raw material adaptable to various aqueous-based application systems.

Demand for Soluble Silk Fibroin Powder is driven by the growing global preference for natural, safe, and high-performance ingredients across industries such as cosmetics, biomedicine, and food, as well as the expanding application of biodegradable protein materials in advanced fields. Business opportunities lie in developing high-purity, grade-specific products (e.g., cosmetic-grade, medical-grade, food-grade) to meet stringent industry standards, optimizing extraction and modification technologies to enhance solubility and stability, exploring innovative applications in emerging areas like 3D bioprinting and functional food formulations, and strengthening customization capabilities to cater to the specialized needs of vertical markets.
