According to our (Global Info Research) latest study, the global Solids Handling Non-Clog Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Solids handling non-clog pumps offer several advantages when pumping and conveying fluids mixed with solids at a certain concentration, designed with a large flow path, ideal for high solids and heavy slurries, typically used in wastewater applications, raw water intake pumping stations, flood control and dewatering and many other municipal and industrial applications.

Rising consumer demand for clean water along with growing population is expected to boost the growth of the global sewage pumps market over the forecast period. Growing awareness about the environmental impact of untreated water is expected to further support the growth of the market in the near future. Rising environmental awareness and increasing trends in wastewater treatment across the globe are driving the sewage pumps market. Submersible sewage pumps hold a large share in the global sewage pumps market. Demand for wastewater treatment facilities is rising as more new factories are built. The increase in the number of dwellings increases the generation of residential sewage, which in turn drives the demand for sewage pumps. In addition, the rising trend of mergers and acquisitions in the sewage pump market, the increase in investment, and the transfer of wastewater elements have further increased the demand for sewage pumps.
