Abstracts

The global Solvent-based Mandrel Release Agents market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Solvent-based mandrel release agent is a coating agent usually composed of active ingredients and solvent. They are widely used in the manufacturing process, especially when manufacturing products with complex shapes, to avoid adhesion problems between the product and the mold or mandrel. After these release agents are coated on the surface of the mold or mandrel, the solvent will evaporate quickly, leaving the active ingredients to form a lubricating film to reduce friction and adhesion between the product and the mold.

This report studies the global Solvent-based Mandrel Release Agents production, demand, key manufacturers, and key regions.
