The global Solventless Laminating Machine for Packaging market size is expected to reach \$ 791 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, global Solventless Laminating Machine for Packaging production reached approximately 1,695 units, with an average global market price of around 285.6 K USD/unit.

Solventless Laminating Machine for Packaging is a core equipment in the soft packaging industry, which adopts 100% solid content reactive adhesives to composite two or more substrates such as plastic films, aluminum foils and special papers without using organic solvents. It realizes bonding and curing through precise mechanical pressure and temperature control, featuring zero VOCs emission, thin and uniform adhesive layer, and high composite strength. Widely applied in food, pharmaceutical and daily chemical packaging fields, it can meet the strict requirements of high barrier, sterile, and heat-resistant packaging, and is a key equipment for green and efficient packaging production.

The demand for this machine is driven by global environmental policies on VOCs emission control, the rising demand for high-end and safe packaging from downstream industries, and the green transformation trend of the packaging industry. Business opportunities lie in developing intelligent models integrated with precise control and remote maintenance functions, optimizing technologies to adapt to special substrates and multi-layer composite needs, expanding the aftermarket service system, and seizing the import substitution market by enhancing core technology competitiveness, while exploring emerging regional markets with booming packaging industry.
