Abstracts

According to our (Global Info Research) latest study, the global Solventless Laminating Machine for Packaging market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A solventless laminating machine for packaging is a specialized industrial equipment used in the production of flexible packaging materials. Unlike traditional solvent-based laminating machines, which use liquid adhesives containing volatile organic compounds (VOCs), solventless laminating machines employ solvent-free adhesive systems to bond multiple layers of packaging substrates together. These machines typically consist of unwinding units for the incoming substrates, coating stations where the adhesive is applied, and laminating stations where the layers are bonded under pressure. The absence of solvents in the adhesive formulation eliminates the need for drying ovens and reduces environmental emissions, making solventless laminating machines more energy-efficient and environmentally friendly. They are commonly used in the food and beverage industry, pharmaceuticals, and other sectors where product safety and sustainability are paramount. Solventless laminating machines offer high-speed production capabilities, excellent bond strength, and the flexibility to laminate various materials, including films, foils, and papers, to create durable and attractive packaging solutions.
