According to our (Global Info Research) latest study, the global Solvents for Battery Electrolyte market size was valued at US\$ 2268 million in 2025 and is forecast to a readjusted size of US\$ 4440 million by 2032 with a CAGR of 10.0% during review period.

Solvents for battery electrolyte are organic liquid materials used exclusively to dissolve lithium salts and enable ion transport within lithium-ion battery cells. These solvents, mainly carbonate-based systems, directly influence ionic conductivity, operating temperature range, and safety characteristics of the electrolyte. In 2025, the average global selling price of battery-grade electrolyte solvents is estimated at approximately US\$2.9 per kilogram, with global consumption volume reaching around 760 thousand metric tons. The industry typically maintains a gross margin range of 15%–28%, reflecting its position as a high-purity but cost-sensitive chemical segment. The supply chain includes upstream petrochemical feedstocks; midstream solvent producers focusing on synthesis, purification, dehydration, and consistency control; and downstream electrolyte manufacturers supplying lithium-ion batteries for electric vehicles, energy storage systems, and consumer electronics.
