## Abstracts

The global Solvents for Battery Electrolyte market size is expected to reach \$ 4440 million by 2032, rising at a market growth of 10.0% CAGR during the forecast period (2026-2032).

Solvents for battery electrolyte are organic liquid materials used exclusively to dissolve lithium salts and enable ion transport within lithium-ion battery cells. These solvents, mainly carbonate-based systems, directly influence ionic conductivity, operating temperature range, and safety characteristics of the electrolyte. In 2025, the average global selling price of battery-grade electrolyte solvents is estimated at approximately US\$2.9 per kilogram, with global consumption volume reaching around 760 thousand metric tons. The industry typically maintains a gross margin range of 15%–28%, reflecting its position as a high-purity but cost-sensitive chemical segment. The supply chain includes upstream petrochemical feedstocks; midstream solvent producers focusing on synthesis, purification, dehydration, and consistency control; and downstream electrolyte manufacturers supplying lithium-ion batteries for electric vehicles, energy storage systems, and consumer electronics.

This report studies the global Solvents for Battery Electrolyte production, demand, key manufacturers, and key regions.
