Abstracts

The global Sorbeth-30 market size is expected to reach $ 42.10 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of Sorbeth-30 was approximately 6,200 metric tons. The average manufacturer-level market price was about US$4.6 per kilogram, while the gross margin of major manufacturers ranged from approximately 25% to 38%.

Sorbeth-30 is a nonionic polyoxyethylene ether produced through the addition reaction of sorbitol with ethylene oxide. Its molecular structure is based on a polyhydric sorbitol backbone with an average addition of approximately 30 moles of ethylene oxide, while retaining multiple terminal hydroxyl groups. As a result, it combines strong hydrophilicity with a certain degree of surface activity. Commercial products are generally available as colorless to pale-yellow viscous liquids or pastes and exhibit good water solubility, hygroscopicity, formulation compatibility, and chemical stability.

The product primarily functions as a humectant, wetting agent, dispersing agent, solubilizer, cosolvent, and formulation modifier. It can improve the homogeneity and flow properties of aqueous formulations, as well as the compatibility of active ingredients. Major applications include personal care products, pharmaceutical formulations, cleaning products, textile dyeing and printing, and agrochemical formulations. Product grades differ mainly in color, hydroxyl value, moisture content, pH, and the control of residual ethylene oxide and 1,4-dioxane. Depending on the intended application, Sorbeth-30 can generally be classified into industrial grade and personal care grade.
