The global Soybean Pesticides market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pesticides play an irreplaceable role in preventing and controlling crop diseases and insect pests and ensuring increased grain production and income. The global crop pesticide market sales in 2022 will be US\$69.3 billion, with a CAGR of 5% in the past five years. The division of labor in the global pesticide industry chain has basically taken shape, with multinational giants firmly controlling the two high-value-added links of front-end innovative drug research and development and terminal preparation sales channels, thanks to a complete basic chemical industry system and highly competitive cost control levels. Since the outbreak of the COVID-19 epidemic, international food prices have risen sharply, demand for pesticides has increased simultaneously, and the price index has reached a record high. The industry has ushered in a highlight moment that has lasted for two years. Looking forward to 2023, there will be greater pressure for a correction in the economic climate, and the market is showing a cooling trend. However, in the long term, with the world attaching great importance to food security, demand for pesticides is very resilient. With the continuous upgrading of pesticide variety structure, the market size is expected to maintain steady growth.

It refers to chemical agents used in agriculture to prevent and control pests and diseases and regulate the growth of soybeans.
