Abstracts

According to our (Global Info Research) latest study, the global Space Attenuator market size was valued at US\$ 75 million in 2024 and is forecast to a readjusted size of USD 98 million by 2031 with a CAGR of 4.2% during review period.

The main function of the space attenuator is to reduce the signal strength to meet the specific requirements of signal strength in space communications, detection and navigation. In the space environment, due to the long signal transmission distance and complex environment, the signal strength may be too high or too low, so an attenuator is needed to adjust the signal strength to ensure stable transmission and reception of the signal.
