According to our (Global Info Research) latest study, the global Space-Based Broadband Internet market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Sky Broadband Internet is a broadband interconnection of different orbits, various types of satellites, and ground application terminals, organically forming a system-optimized, fully functional Internet network, and interconnecting with the new generation Internet, ground mobile communication networks, etc. Provide information services such as wide-area coverage, high-speed transmission, heterogeneous interconnection, comprehensive applications, and mobile and fixed access for all types of land, sea, air and space users. The space-based broadband Internet market can include transportation and logistics, mobile communications, disaster relief or emergency response, network offloading, broadband connectivity in remote areas, Internet of Things (IoT), and machine-to-machine (M2M) communications.

Driven by the increasing demand for information, entertainment and commercial broadband Internet access and the technological progress of next-generation communication satellite constellations, the current space-based broadband Internet market has attracted the attention of many countries and enterprises, and the market size has grown rapidly. It is expected that the average annual compound growth rate will exceed 20% in the next 10 years. Many foreign companies have plans in the satellite broadband Internet market, such as SpaceX's Starlink plan, OneWeb's constellation Internet plan, and Boeing's satellite broadband plan. SpaceX's Starlink plan will launch 42,000 satellites.
