## Abstracts

The global Space Capsule market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Space capsule is a type of spacecraft that is designed to carry humans and cargo into space and then return them safely to Earth. It is typically a small, cone-shaped vehicle that is equipped with the necessary life support systems, propulsion systems, and heat shielding to protect the crew and cargo during launch and reentry. Space capsules are typically launched into space atop a rocket or launch vehicle and are designed to operate independently in space for a period of time before returning to Earth. They are also designed to withstand the harsh conditions of space, including radiation, extreme temperatures, and microgravity.
