Space debris recycle service is a service aimed at cleaning up the garbage and waste in space. As human activities in space become more and more frequent, the amount of garbage in space is also increasing. This debris includes discarded satellites, rocket debris, fragments, and other remnants, which may pose a threat to space navigation and even endanger human safety.

The main goal of space debris removal services is to collect this debris and safely bring it back to Earth or place it in a specific orbit to avoid posing a threat to space navigation. This service is usually provided by government agencies or private companies, who use various technologies to track, capture, and process space debris, including using robots, lasers, and other tools.
